

# Baecore Business Intelligence

**Baecore's Business Intelligence (BBI) enables the harnessing of raw data elements, information and knowledge into meaningful and actionable information throughout all levels of the organization.**

Essential to making business information work for you is having a clear plan of how information is managed in the organization; who is responsible for the data, is it clean and consistent, what information does staff need to interact with? Fundamentally you need to take the business data and transform it into Business Intelligence and knowledge that allows actionable results.

## The Challenge

Many organizations have yet to fully realize the benefits of available information within their organization. Frequently the data is trapped within silos and disparate data sources leaving people to manually struggle to extract and assemble data. A holistic view of business knowledge and results that can be trusted is hindered by a lack of standards and the ability to compile analytics into actionable business results. Improving the speed of access to this data is the key to transparency, visibility and informed decision-making.

## The Solution

BBI is a set of methodologies, processes and systems that harness raw data elements, information, and knowledge into meaningful and actionable information for management and staff enabling effective strategic, tactical and operational direction.

These resources include:

- Intelligent Dashboards
- User Controlled Reporting
- Data Visualization
- Process Congruency
- Data Quality
- Data Consolidation (Master Data Management)
- Reporting
- Analytics and Trending

## The Benefit

BBI provides centralized, integrated, best practices based planning which reduces the hundreds of person hours involved in manually compiling reports and delivering intelligence for decision making. BI provides reliable, cross-departmental, financial and operational performance information to manage, measure and improve program and service effectiveness.

## Baecore Business Intelligence

### The Methodology

A Business Intelligence project starts with an assessment focusing on user requirements and obtains a current-state environment. Essential to our approach is a series of interviews with key stakeholders throughout the organization. As part of the Business Intelligence methodology, Baecore Group has developed an efficiency and utilization diagnostic tool to support the capture and analysis of this information. A desired state definition is compiled from information obtained during the assessment interviews, gap analysis and input from the diagnostic tool.

A project plan is developed based on the business state, timing requirements, barriers and resources. The engagement results in a robust Business Intelligence strategy and roadmap for implementation.

### Why Baecore Group

Baecore is experienced with delivering enterprise solutions and tools to the mid-sized organization. Because we are focused on the middle market we offer comprehensive solutions that are designed to achieve optimal information usage within your organization.

We help unite silos, engage departments and find ways to align business practices to achieve goals, provide transparency, improve efficiency and increase service levels.

Understanding financial constraints of local government, we know the importance of aligning activities with goals, measuring daily performance of programs and identifying and correcting negative trends

### Enabling Business Intelligence

Business Intelligence requires addressing and combining the four core aspects of Business Information:

- Master Data Management
- Data Quality
- Process Congruency
- Trending and Analytics

This integrated approach ensures that the insight derived from your data becomes actionable information that you can depend on for decisions to evolve your business and deliver increases in utilization, effectiveness and services throughout your community.

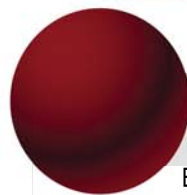

### Next Steps

Let us help you make your business information count and achieve significant performance improvement, to become an Intelligent Enterprise.
