

# Baecore Intelligent Dashboards

Intelligent Dashboards capture and provide data quality, analytics, trending and visualization improving and enhancing business process, information communication and overall decision making.

Ultimately improving the speed of access to your data is the key to transparency, visibility and informed decision-making. Intelligent Dashboards provide a display of business knowledge in an actionable format.

## The Challenge

Government agencies of all shapes and sizes are creating mountains of data resident in their transaction processing systems. With new technologies and services, the volume and complexity of that data grows as the organization is surrounded by applications extending into areas such as Customer Relationship Management, Senior Services, Public Safety, Community Development, Public Works, etc. Huge volumes of data from disparate sources is a challenge. Achieving transparency and visibility is no longer simply a lofty goal, but a core necessity.

## The Solution

Intelligent Dashboards monitor the contribution of various departments in their organization and gauge how an organization is performing. They capture and report specific data points from each department helping improve and enhance business process

and information communication from real-time and near real-time systems. A Dashboard project is not a replacement technology, but rather an enhancing technology designed to improve overall decision making, transparency, accountability, visibility, accuracy and reporting.

## The Benefit

Baecore's assessment process reviews the current state of the information environment. It addresses desired Dashboard components, where data currently resides, and what analytics or reporting is central to current operations as well as constraints. These insights enable the identification of opportunities to improve knowledge and development of Intelligent Dashboards. This approach allows right-sized solutions to be designed so you can start quickly and phase additional pieces as desired.

## Baecore Intelligent Dashboards

### Enabling Intelligent Dashboards

To implement Intelligent Dashboards, organizations must combine core aspects of Business Intelligence to ensure the implementation of *intelligence*. Baecore focuses on the delivery encompassing core elements including

- Data Quality
- Analytics & Trending
- Data Visualization
- Data Consolidation
- Process Congruency

Efficient and effective use of quality data improves results. Absent these core aspects you run the risk of having just another reporting tool or display of existing information.

**Next Steps:** Let us help you make your business information count and achieve significant performance improvement, to become an Intelligent Enterprise.

### Baecore Group's Delivery Model & Right-size Approach

Our solution specialists are assigned based on the technical, financial and business analysis required for your project. Our approach includes interactive and staff input driven development to ensure a custom solution tailored to your organization. Whether you have an internal or external IT department we collaborate to utilize existing resources and tools to deliver comprehensive yet affordable solution.

### The Methodology

An Intelligent Dashboard project starts with a quick assessment focusing on user requirements and the current-state environment for process and technology. Essential to the approach is a series of interviews with key stakeholders throughout the organization.

Assembly of data, resources and existing tools within the organization are compiled. Barriers and opportunities for Master Data Management are assessed. We identify department specific needs to ensure tailored dashboard designs supporting their objectives.

A project plan is developed based on the business state, timing requirements, barriers and resources. The engagement results in an Intelligent Dashboard strategy and roadmap for implementation.

### Why Baecore Group

Baecore is experienced with delivering enterprise solutions and tools to the mid-sized organization. Because we are focused on the middle market we offer comprehensive solutions that are designed to achieve optimal information usage within your organization.

We help unite silos, engage departments and find ways to align business practices to achieve goals, provide transparency, improve efficiency and increase service levels.

Understanding financial constraints of local government, we know the importance of aligning activities with goals, measuring daily performance of programs and identifying and correcting negative trends

## About Baecore Group Public Sector Consulting
